Lab 09/19

 Please write a program to let user input some variables with different data types and then printout them.
 Please use scanf() and printf() to implement it, and then repeat it with cin and cout.

Example:

Input(int): 10
Input(long): 10

Input(float): 1.234567 Input(double): 1.234567

Input(char): A

Output(int): 10
Output(long): 10

Output(float): 1.234567 Output(double): 1.234567

Output(char): A

2. Please write a program to let user input an ascii code and then printout its character, octal representation, and hexadecimal representation. You can check the result by following ascii table.

Example: Input: 90 Char: Z Oct: 132 Hex: 5a

Reference:

3. Please write a program to let user input two real numbers and one operator, i.e., +, -, *, /, and then printout the relative results.

Example:

Input: 1.23 + 10

Output: 1.230000+10.000000=11.230000

Input: 4.57 – 7.888

Output: 4.570000-7.888000=-3.318000

Input: 4.167 * 9.14687

Output: 4.167000*9.146870=38.115004

Input: 12.4875 / 5.398

Output: 12.487500/5.398000=2.313357
